Profile

I am a web designer/developer with a degree in Anthropology and Computer Science which has enabled me to bring a customer driven skill set to the professional world. My degree in Anthropology has taught me market analysis and user centered design while being complimented with a computer science technical education. I am seeking a position that will allow me to use my expertise in a tangible and effective manner. I have developed necessary skills through my degree in Anthropology to evaluate customer needs and run focus groups, interviews, and surveys as needed to collect further data. I hope to bring my research, design, and programming skills into a meaningful career choice that will positively effect myself as well as future clients.
